## SUBSTITUTE CLAIMS SECTION

## **CLAIMS**

We claim:

A joint to be adhered to nylon resin moldings using a solvent adhesive, in which a material for the joint comprises a copolymerized nylon.

A joint to be adhered to nylon resin moldings using a solvent adhesive, in which a material for the joint comprises a composition comprising a copolymerized nylon and at least one of a nucleating agent and a lubricant.

- 3. A joint to be adhered to nylon resin moldings using a solvent adhesive, in which a material for the joint comprises a composition comprising a copolymerized nylon blend and at least one of a nucleating agent and a lubricant.
- 4. The joint to be adhered to nylon resin moldings as claimed in claim 1, wherein the copolymerized nylon comprises two or more kinds of units derived from lactams containing 6 to 12 carbon atoms, axninocarboxylic acids containing 6 to 12 carbon atoms, and a combination of a dicarboxylic acid containing 3 to 22 carbon atoms and a diamine containing 2 to 20 carbon atoms.
- 5. The joint to be adhered to nylon resin moldings as claimed in claim 3, wherein the copolymerized nylon blend is a blend of a copolymerized nylon and a nylon selected from the group consisting of nylon 6, nylon 11, nylon 12, nylon 6,6, nylon 6,10 and nylon 6,12.
- 6. The joint to be adhered to nylon resin moldings as claimed in claim 2, wherein the nucleating agent is talc, with its content being 0.1 to 5 parts by weight per 100 parts by weight of the resin component.
- 7. The joint to be adhered to nylon resin moldings as claimed in claim 2, wherein the lubricant is a metal soap, with its content being 0.05 to 5 parts by weight per 100 parts by weight of the resin component.
- 8. The joint to be adhered to nylon resin moldings as claimed in claim 1, wherein the copolymerized nylon comprises 5 to 95% by weight of nylon-12 component, based on the

total weight of the copolymerized nylon.

- 9. The joint to be adhered to nylon resin moldings as claimed in claim 3, wherein the copolymerized nylon blend comprises 50 to 90% by weight of the copolymerized nylon and 50 to 10% by weight of nylon 12, based on the total weight of the copolymerized nylon blend.
- 10. The joint to be adhered to nylon resin moldings as claimed in claim 1, which has a dissimilar material molded structure in such a manner that the material for the joint comprises at least a portion of the joint to be adhered to the nylon resin moldings.
- 11. A method for adhering nylon resin moldings, which comprises adhering the nylon resin moldings to a joint comprising (i) a copolymerized nylon or (ii) a composition comprising a copolymerized nylon or a copolymerized nylon blend and at least one of a nucleating agent and a lubricant using a solvent adhesive.
- 12. The method for adhering nylon resin moldings as claimed in claim 11, wherein the solvent adhesive comprises at least one component of a phenolic compound and a fluoroalcoholic compound.
- 13. The method for adhering nylon resin moldings as claimed in claim 11, wherein the solvent adhesive comprises a copolymerized nylon.
- 14. A solvent adhesive for nylon resin moldings, which comprises a solvent and a copolymerized nylon.
- 15. The solvent adhesive for nylon resin moldings as claimed in claim 14, which comprises 0.5 to 20% by weight, based on the total weight of the solvent adhesive, of a copolymerized nylon comprising two or more kinds of units derived from lactams containing 6 to 12 carbon atoms, aminocarboxylic acids containing 6 to 12 carbon atoms, and a combination of a dicarboxylic acid containing 3 to 22 carbon atoms and a diamine containing 2 to 20 carbon atoms.
- 16. The solvent adhesive for nylon resin moldings as claimed in claim 15, wherein the copolymerized nylon comprises 5 to 95% by weight of nylon 12 component, based on the

total weight of the copolymerized nylon.

- 17. The solvent adhesive for nylon resin moldings as claimed in claim 14, wherein the solvent comprises at least one of phenolic compounds and fluoroalcoholic compounds.
- 18. An adhesion structure of nylon resin, wherein a material comprising a copolymerized nylon is adhered to a material comprising other nylon resin using a solvent adhesive.
- An adhesion structure of nylon resin, wherein a material comprising a composition comprising a copolymerized nylon or a copolymerized nylon blend and at least one of a nucleating agent and a lubricant is adhered to a material comprising other nylon resin using a solvent adhesive.
- 20. The adhesion structure of nylon resin as claimed in claim 18, wherein the solvent adhesive comprises a copolymerized nylon.
